

**Adinda Sannen, PhD**

Trained as biologist (MSc, Antwerp University, 1998), animal behaviour has always sparked my curiosity. As such, my PhD research (Antwerp University, 2003) focused on the relation between hormones and behaviour in primates.

I am currently based at Odisee University of Applied Sciences in Belgium, where I am involved in researching various topics concerning animal behaviour and welfare. As a lecturer, the focus lies on ethology, integrating the evolutionary framework into teaching.

Additionally, I contribute as a lecturer and ombuds person for the postgraduate courses VB-CAB, CAB and ABT and I teach an optional module on the scientific study of animal behaviour.
